TASK1_REPORT

INTRODUCTION

This project focuses on performing a basic vulnerability assessment on a test website using cybersecurity tools such as Nmap, OWASP ZAP, and Browser Developer Tools. The objective is to identify potential security weaknesses and analyze possible risks in a controlled environment.

OBJECTIVE

The objective of this assessment is to perform basic reconnaissance, identify open ports and services, analyze website headers, and observe possible vulnerabilities using industry-standard security tools.

Tools Used

Tool	Purpose
Nmap	Network scanning
OWASP ZAP	Vulnerability assessment
Browser DevTools	Header and request analysis

Target Information

- Target Website:
- <https://scanme.nmap.org>
- This website is an official legal testing environment provided for security practice and educational purposes.

NMAP SCAN RESULTS

Port	Service	Status
22	SSH	Open
80	HTTP	Open
9929	nping-echo	Open
31337	Elite	Open

nmap.scanme.nmap.org

Target Information

Browser Developer Tools were used to inspect network traffic, response headers, and website behavior. Request and response headers were analyzed through the Network tab.

OWASP ZAP FINDINGS

OWASP ZAP was used to perform automated vulnerability scanning and security observation. Basic findings included information disclosure observations and security header analysis.

RISK ANALYSIS

vulnerability	Risk Level
open ports	Medium
Information Disclosure	Medium
Missing Security Headers	Low

RECOMMENDATIONS

Issue	Recommendation
open ports	Restrict unnecessary services
Information Disclosure	Hide server details
Missing Security Headers	Implement security headers

CONCLUSION

The vulnerability assessment successfully demonstrated the use of cybersecurity tools for reconnaissance and basic security analysis. The project helped in understanding network exposure, web security observations, and vulnerability assessment methodologies in a controlled environment.

You can also use browsers that you don't launch from ZAP, but will need to configure them to proxy through ZAP and to import the ZAP root CA certificate.
